CAMPAIGN AGAINST THE
tiger MOSQUITO

The Town Hall of Teulada issues an appeal in order to prevent the proliferation of the tiger mosquito and to help minimise the problems caused by this insect.

This Town Hall recommends that citizens take the following action in their own private property:

- Empty exterior containers which can accumulate water: toys, ashtrays, vases, buckets, cans, plates, containers with plastic lids, bowls, garden pools, etc. Turn over a rock, pour them down or remove them from the elements.

- Avoid water accumulation in drainage areas or gutters.

- Avoid holes and depressions in the ground where water can accumulate, and cover holes in tree trunks by filling them with sand.

- Protect wells and water tanks with mosquito mesh.

- Carry out adequate maintenance of water in swimming pools through its chlorination to avoid water going bad and, if possible, keep them covered whilst not in use, avoiding water accumulations on canoes and plastic covers.

Should you discover a problem in detached properties or estates, you are advised to carry out maintenance and avoid leaving debris, or to contact a company specialising in pest control to carry out the pertinent treatment in the structures which are susceptible to the proliferation of mosquitoes.

For further information, please see the suggestions on the Dirección General de Salud Pública de la Comunidad de Sanidad Universal y Salud Pública's website, within the www.spsan.gva.es portal.
